

## Who's at Risk From COVID-19? A Closer Look at Occupations in Puerto Rico

May 19, 2020 

As discussions of “reopening” the Puerto Rican economy advance, we feel it’s important to consider which workers face greater risks of becoming infected with the coronavirus, given some particular attributes of their occupations. For example, because some occupations require constant person-to-person interactions, like dentists and flight attendants, and others only on occasion—think of sculptors and archivists—the risk of infection varies significantly depending on the kind of job you have and how you work.

To identify the risk profile of occupations in Puerto Rico, we combined data from the [Bureau of Labor Statistics](#) (BLS) and [the O\\*Net Program](#), which publishes detailed databases that include a series of occupation-specific descriptors. Our methodology is similar to the one employed by [Marcus Lu](#) from [Visual Capitalist](#), save for some key adjustments. From the BLS databases, we include the annual median wages and the total number of people employed as of May of 2019 (the latest data available). From the O\*Net data (published in August of 2019), we incorporated three job attributes, each ranked from low (1) to high (5):

- Whether a job requires a high or low degree of contact with others;
- Physical proximity to others; and
- Exposure to diseases or infections

The sum of the three job attributes scores yields the “Risk Score”, which ranges from 5.41 (relatively low risk) to 14.67 (high risk). Below is a snapshot of a table organized by major occupational groups (management, sales healthcare practitioners, etc.) that provides several key figures for specific occupations—a PDF file with the full table is attached.

As the “Risk Score” column (far right) shows, **healthcare-related occupations have higher risk scores, while fine artists, economists and camera repairers exhibit the lowest ones.** With regards to occupational groups, healthcare practitioners have the highest average risk score (13.50), while architecture and engineering occupations have the lowest average risk score (8.4).

You may access our website to explore a series of [data visualizations](#) aimed at making this data more accessible and easier to digest.

In conducting this analysis, our goal is not to determine which firms or businesses should open first as shelter in place measures are relaxed. However, we hope that these results can inform analyses being conducted by medical and public health experts. **More importantly, risk scores can move upwards or downwards depending on the safety measures taken by business owners, managers and workers.** Thus, these figures should be taken as benchmarks for planning and preparation purposes.

Finally, the table does not include all occupations in Puerto Rico, given certain data constraints. Access our website for the [full list of the occupations](#) included in the O\*Net databases.
